

KAUSHIK SIVAKUMAR / COREWEAVE HACKS

STREETWISE

Robots that learn the street
before they enter it.

Find navigation mistakes in simulation
before spending scarce hardware-testing time.

42 → **64** completed crossings / 64 unseen tests

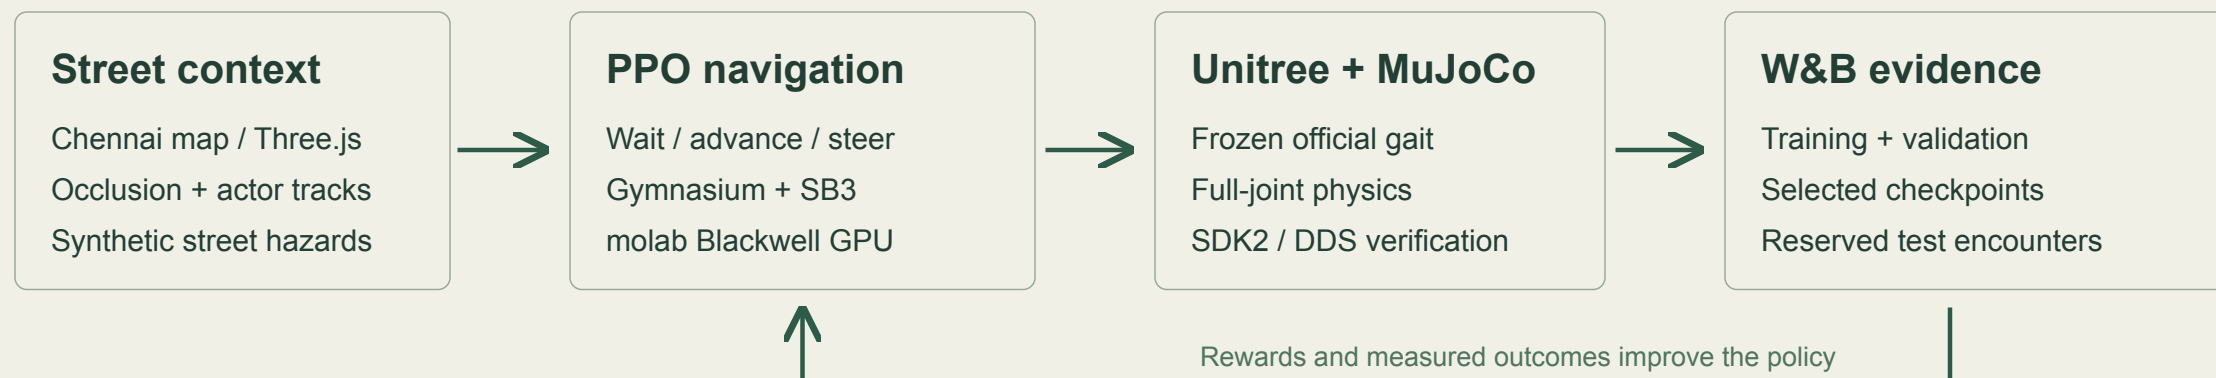

22 → 0 clearance violations · frozen Unitree gait

Actual application view · recorded MuJoCo simulation · Kanakadhara, Central Avenue

STREETWISE / A loop you can inspect.

Measured robot learning, from street context to held-out evidence.

Companion world-model loop

Three predicted futures → independent simulator outcome → curriculum focus → fit → validation gate

Weave traces the W&B-hosted Qwen analyst. marimo exposes trajectories, training graphs and reproducible controls.

The learned dynamics sandbox and physical robot PPO experiment use separate simulators and metrics.

Simulation only · inferred scene dimensions · robot base locomotion remains frozen · no hardware deployment claim

Reproduce. Inspect. Compare.

Code, checkpoints, 118-second demo and run instructions.

[github.com/KaushikSiva/
g1-street-wise](https://github.com/KaushikSiva/g1-street-wise)

Existing Chennai map disclosed as prior work. Synthetic encounters and inferred dimensions; no physical robot safety claim.
